## INSTALLATION FOR ADOBE LIGHTROOM

CINEMATIC

# DESKTOP - ADOBE LIGHTROOM

### **Lightroom Creative Cloud on Mac or Windows:**

- Download your purchased Lightroom Presets which will come in a .zip file and upack it.
- Start Lightroom Creative Cloud and select an image.
- Click on File -> Import Profiles and Presets in the head menu.
- Navigate to the folder where you unpacked the .zip and select files from the "Lightroom CC 2019-2024+" folder.
- Now all Presets are ready to be used. Just open the Presets Panel on the right side and click on a Preset to apply it.

### **Lightroom Classic (version 7.3 or later) on Mac or Windows:**

This instruction will guide you through the installation process for Adobe Lightroom Classic version 7.3 (since April 2018) and later which are using the .xmp preset format.

- Download your purchased Lightroom Presets which will come in a .zip file and upack it.
- Start Lightroom, navigate to the Develop Module and click on File -> Import and Develop Profiles and Presets in the head menu.
- Navigate to the folder where you unpacked the .zip and select files from the "Lightroom CC 2019-2021+" folder.
- Now all Presets are ready to be used. You find them in the Presets section on the left.

# DESKTOP - ADOBE PHOTOSHOP

## INSTALLATION FOR ADOBE PHOTOSHOP:

## HOW TO USE:

CINEMATIC

1. Download, locate and unpack the ZIP.
2. Copy the contents of the "Photoshop ACR" folder (.xmp files) in the following location:

**Mac\*:**

(user)/Library/Application Support/Adobe/Camera Raw/Settings

\* Depending on your MacOS version, the Library menu may be hidden. To show it, hold the Option key while selecting the "Go" menu in the Finder.

**Windows:**

(user)\Application Data\Adobe\Camera Raw\Settings

or

C:\Users\user\AppData\Roaming\Adobe\Camera Raw\Settings

3. Make sure you only copy the preset files (.xmp) into the "settings" folder specified above (folders are not supported in Adobe Camera Raw).

- With RAW files, Adobe Camera Raw will launch automatically.
- With JPEGs, one of the ways to open them in Adobe Camera Raw is to launch Adobe Photoshop, choose Open As..., select Camera Raw from the file types list and then select the file(s) you want to open.
- Then the usual Adobe Camera Raw dialogue will appear in Photoshop. The Presets tab is a next-to-last tab on the right panel.
- If you've already copied the presets to the Settings folder (see installation), all of them will appear there.
- If you haven't, just hit the small menu icon (3 lines) in the top right corner of the panel and select "Load Settings". Then browse for the preset to open it from disk. This will load and apply the selected preset, but you'll have to browse for the next one again (so it's better to install all of the presets first).

# INSTALLATION & USAGE FOR MOBILE:

CINEMATIC

## MOBILE VERSION

### Method 1

(WITH active Adobe Creative Cloud subscription)

You need to install all Presets in the Lightroom desktop application first. It is important that you use the Adobe Lightroom Creative Cloud and not the Adobe Lightroom Classic application. After installing all Presets they will automatically be synced to your mobile device via cloud.

### Method 2

If you are a free user of Adobe Lightroom mobile app, please use this method:

- Use .dng presets from the Mobile folder provided in the ZIP. Optionally, you can upload them to the cloud to download from your phone directly.
- Open the .dng file(s) of the preset(s) in your Adobe Lightroom app and tap "Copy settings", then open the photo you are working with and hit "Paste settings" to apply the preset. This method will work only for one preset at a time.

# LUTS FOR VIDEO

## INSTALLATION FOR ADOBE PREMIERE PRO:

## INSTALLATION FOR ADOBE AFTER EFFECTS:

CINEMATIC

Applying your LUTs and searching individually for each project can hinder your workflow. Installing LUTs in Adobe Premiere Pro will make your custom LUT files available from the Creative tab in the Lumetri color panel instead of the Basic Correction tab. Follow the next steps for your operating system to install LUTs.

### Install for Windows users:

Copy your LUT files into the Windows directory C:\Program Files\Adobe\Adobe Premiere Pro 2024\Lumetri\LUTs\Creative and restart your Premiere Pro session.

### Install for Mac users:

Go to Applications in your finder window and find the Adobe Premiere Pro folder. Right-click it and select "Show Package Contents." Now follow the directory Contents > Lumetri > LUTs > Creative and copy your custom cube files in this folder.

- **Locate the "Effects and Presets" tab:**

The "Effects and Presets" tab should be in your workspace by default. If you can't find it, simply go to "Window" and check the "Effects and Presets" option. You can also tap "Ctrl+5" on your keyboard.

- **Search for 'Lumetri Color' in the 'Effects & Presets' panel:**

Drag Lumetri Color onto your clip you want to apply the LUT. You can apply Lumetri Color onto an adjustment layer also, which you can place above your footage in your timeline. This will apply any effects that are on the adjustment layer, to all the clips below it.

- **Applying the LUT:**

You can apply the effects by dragging and dropping it onto your clip or adjustment layer in the timeline. Then you can apply the LUT by going to the 'Creative' tab and find the Load LUT drop down menu. This is where you can browse your LUTs to import them.
